It is the smallest, lightest and most efficient personal water propulsion device we have found, able to pull you along at about 4.8kmph for 60 minutes.

**Strong** swimmers and weak paddlers alike find that it greatly extends the amount of time they can spend in the water before becoming tired.

It stops and floats if the handle is let go, and is easy to transport (sealed gel battery is safe for air travel).

| Model Number                                                                                                                                                                                                                                                                                                                  | Basic Price's Key Specification                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Basic Prices                                                               |
